

Greenlam Industries Ltd. installs solar power generation plant at its manufacturing unit

Greenlam Industries Ltd. has recently announced the installation of solar panels at their company's manufacturing unit in Behror, Rajasthan. This initiative by Greenlam Industries will reduce the carbon emission by 13,90 Lac Kg/Year and will save 2,70 Lac litres of fuel every year. The unit, with a capacity of 0.955 MW, aims to contribute towards saving around 13.50 Lac units of power per year. While Behror unit's total power requirement is 35K Units /Day, Greenlam Industries has installed solar power generation capacity to contribute 0.955 MW/Day which is approximately 12% of its present day total power requirement. The primary objective of this step is to reduce the carbon footprint in our manufacturing process by using Green Energy which is also economical in the long run so that we are able to provide power to remote areas.
