

# The anti-bacterial laminates from Greenlam Industries

These surfaces are highly effective in retarding the growth of common bacteria up to 99.99%\* which helps in keeping the spaces hygienic, germ-free and devoid of unhealthy contaminants

15 Jul 2020

**G**reenlam Industries' antibacterial laminate range features Greenlam AFX Laminates. Most importantly, the company takes pride for being the first in the country to introduce anti-bacterial surfaces over 10 years ago.

It has been a standard offering under its flagship brand Greenlam Laminates and Compacts. These surfaces are highly effective in retarding the growth of common bacteria up to 99.99%\* which helps in keeping the spaces hygienic, germ-free and devoid of unhealthy contaminants. Given that in hotels, the reception or waiting area always witnesses high traffic and contact with surfaces, the Greenlam AFX anti-bacterial laminates can withstand the harsh treatment as tabletops, wall panelling or seating area.

It is specially designed under high temperature to create a non-porous and impression-free surface making it easy to clean impurities or grease marks. This product can also be used for areas such as laundry cabins, service rooms, meeting or ballrooms that experience day to day operations in the hotel.
